EXPERIMENT 5

ROLL NO:240701804 **NAME:ROHITH R**

Task Analysis

Task Analysis is the process of breaking down a user's interaction with a system into smaller steps to understand how the user completes a goal. It helps in improving usability and identifying possible issues in the application.

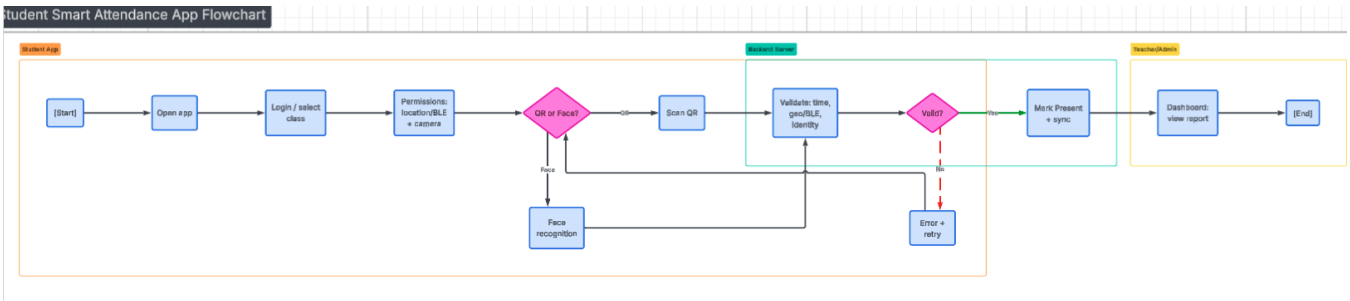
In this experiment, **Task Analysis is applied to a Student Smart Attendance App to understand how students and faculty use the application to mark and monitor attendance.**

User Flow

User Flow is a visual representation of the steps a user follows to complete a task inside an application. It shows navigation paths, decision points, and different possible outcomes.

User Flow for Student Smart Attendance App

Start → Open App → Login / Register → Dashboard → Select Subject → Mark Attendance → Attendance Recorded → View Attendance Report → Notifications → Logout → End



Step-by-Step Process

Step 1: Start

• The user opens the **Student Smart Attendance application** on their mobile phone or computer.

Step 2: Login / Sign Up

• If the user already has an account, they log in using their **username and password**.
• If not, they create a new account using the **Register option**.

Step 3: Dashboard

• After logging in, the system displays the **dashboard**.
• The dashboard shows information such as attendance percentage, subjects, and notifications.

Step 4: Select Subject

• The student or faculty selects the **subject or class** for which attendance needs to be recorded.

Step 5: Mark Attendance

• The faculty marks the attendance of students as **Present or Absent**.
• In some systems, attendance can also be marked using **QR code, facial recognition, or biometric verification**.

Step 6: Attendance Recorded

• The attendance data is stored in the **database**.
• The system confirms that attendance has been successfully recorded.

Step 7: View Attendance Report

• Students can check their **attendance percentage and subject-wise attendance records**.

Step 8: Notifications

• The system sends **notifications or alerts** if attendance is below the required percentage.

Step 9: Logout

• After completing the task, the user logs out of the application.

Step 10: End

• The process is completed.
• The user can close the application or use it again later.
